CLAIMS

What is claimed is:

1	1.	A power system for powering a venicle comprising at least one ran
2	unit and at least one electric alternator associated with the at least one fan unit,	
3	wherein:	
4	a)	the at least one fan unit comprises a central axis and at least one
5	fan blade;	
6	b)	the at least one fan blade extends axially from and spans
7	substantially the length of the central axis; and	
8	c)	the at least one fan unit is mounted on the vehicle laterally across at
9	least a portion of the vehicle.	
1	2.	The system as claimed in Claim 1, further comprising at least two
2	fan units.	
1	3.	The system as claimed in Claim 1, wherein the system powers the
2	electrical systems of the vehicle.	
1	4.	The system as claimed in Claim 1, further comprising at least two
2	electric alternators associated with each of the fan units.	
1	5.	The system as claimed in Claim 2, wherein the at least two fan units
2	are positioned one behind the other.	
1	6.	The system as claimed in Claim 5, wherein the at least two fan units
2	are located in the same horizontal plane.	
1	7.	The system as claimed in Claim 5, wherein the at least two fan units
2	are located in different horizontal planes.	
1	8.	The system as claimed in Claim 7, wherein the at least two fan units
2	are located in the same sloped plane.	
1	9.	The system as claimed in Claim 8, wherein the sloped plane slopes
2	upwards from the front of the vehicle to the back of the vehicle.	
1	10.	The system as claimed in Claim 1, wherein each fan unit further
2	comprises at least three fan blades.

- 1 11. The system as claimed in Claim 10, wherein the fan blades are concave.
- 1 12. The system as claimed in Claim 10, wherein the fan blades are 2 curved at the ends.
 - 13. The system as claimed in Claim 1, wherein the central axis is perpendicular to a centerline extending from the front of the vehicle to the back of the vehicle.
 - 14. The system as claimed in Claim 13, wherein the fan unit comprises a plurality of fan blades and fewer than the plurality of fan blades are contacted by a driving force at any given time and position.
 - 15. The system as claimed in Claim 14, wherein the driving force is selected from the group consisting of airflow and waterflow.
 - 16. A combination of an at least partially electrically powered vehicle and a power system for powering the vehicle, the power system comprising at least one fan unit and at least one electric alternator associated with the at least one fan unit, wherein:
- 5 a) the at least one fan unit comprises a central axis and at least one 6 fan blade;
 - b) the at least one fan blade extends axially from and spans substantially the length of the central axis; and
 - c) the at least one fan unit is mounted on the vehicle laterally across at least a portion of the vehicle.
 - 17. The combination as claimed in Claim 16, wherein the power system further comprises at least two fan units.
 - 18. The combination as claimed in Claim 16, wherein the power system powers the electrical systems of the vehicle.
- 1 19. The combination as claimed in Claim 16, wherein the power system 2 further comprises at least two electric alternators associated with each of the fan units.
- 1 20. The combination as claimed in Claim 17, wherein the power system 2 further comprises at least two fan units are position one behind the other.

- 1 21. The combination as claimed in Claim 20, wherein the at least two 2 fan units are located in the same horizontal plane.
- 1 22. The combination as claimed in Claim 20, wherein the at least two 2 fan units are located in different horizontal planes.
 - 23. The combination as claimed in Claim 22, wherein the at least two fan units are located in the same sloped plane.
 - 24. The combination as claimed in Claim 23, wherein the sloped plane slopes upwards from the front of the vehicle to the back of the vehicle.
 - 25. The combination as claimed in Claim 16, wherein each fan unit further comprises at least three fan blades.
 - 26. The combination as claimed in Claim 16, wherein the vehicle contains a hybrid gasoline and electrically driven engine.
- 1 27. The system as claimed in Claim 25, wherein the fan blades are 2 concave.
- 1 28. The system as claimed in Claim 25, wherein the fan blades are 2 curved at the ends.
 - 29. The system as claimed in Claim 16, wherein the central axis of the power system is perpendicular to a centerline extending from the front of the vehicle to the back of the vehicle.
 - 30. The system as claimed in Claim 29, wherein the fan unit comprises a plurality of fan blades and fewer than the plurality of fan blades are contacted by a driving force at any given time and position.
 - 31. The system as claimed in Claim 30, wherein the driving force is selected from the group consisting of airflow and waterflow.
- 32. A power system for powering a vehicle comprising at least two fan units and two electric alternators associated with each of the at least one fan units, wherein:
- 4 a) the at least two fan units each comprise a central axis and at least 5 three fan blades;
- b) the at least three fan blades extend axially from and span
 substantially the length of the central axis; and

- 8 c) the at least one fan unit is mounted on the vehicle laterally across at 9 least a portion of the vehicle.
- 1 33. The system as claimed in Claim 32, wherein the at least two fan units are positioned one behind the other.
 - 34. The system as claimed in Claim 33, wherein the at least two fan units are located in the same horizontal plane.
 - 35. The system as claimed in Claim 33, wherein the at least two fan units are located in different horizontal planes.
 - 36. The system as claimed in Claim 35, wherein the at least two fan units are located in the same sloped plane sloping upwards from the front of the vehicle to the back of the vehicle.
- 1 37. The system as claimed in Claim 33, wherein the fan blades are concave.
- 1 38. The system as claimed in Claim 33, wherein the fan blades are curved at the ends.
 - 39. The system as claimed in Claim 32, wherein the central axis is perpendicular to a centerline extending from the front of the vehicle to the back of the vehicle.
 - 40. The system as claimed in Claim 39, wherein the fan unit comprises a plurality of fan blades and fewer than the plurality of fan blades are contacted by a driving force at any given time and position.
 - 41. The system as claimed in Claim 40, wherein the driving force is selected from the group consisting of airflow and waterflow.
 - 42. A combination of an at least partially electrically powered vehicle and a power system for powering the vehicle, the power system comprising at least two fan units and two electric alternators associated with each of the at least one fan units, wherein:
- 5 a) the at least two fan units each comprise a central axis and at least 6 three fan blades;
 - b) the at least three fan blades extend axially from and span substantially the length of the central axis; and

- 9 c) the at least one fan unit is mounted on the vehicle laterally across at least a portion of the vehicle.
- 1 43. The combination as claimed in Claim 42, wherein the at least two 2 fan units are positioned one behind the other.
 - 44. The combination as claimed in Claim 43, wherein the at least two fan units are located in the same horizontal plane.
 - 45. The combination as claimed in Claim 43, wherein the at least two fan units are located in different horizontal planes.
- 1 46. The combination as claimed in Claim 45, wherein the at least two 2 fan units are located in the same sloped plane sloping upwards from the front of 3 the vehicle to the back of the vehicle.
- 1 47. The system as claimed in Claim 42, wherein the fan blades are 2 concave.
- 1 48. The system as claimed in Claim 42, wherein the fan blades are 2 curved at the ends.
 - 49. The system as claimed in Claim 42, wherein the central axis is perpendicular to a centerline extending from the front of the vehicle to the back of the vehicle.
 - 50. The system as claimed in Claim 49, wherein the fan unit comprises a plurality of fan blades and fewer than the plurality of fan blades are contacted by a driving force at any given time and position.
 - 51. The system as claimed in Claim 50, wherein the driving force is selected from the group consisting of airflow and waterflow.
